11.2.1. Registration Template

Parameter name:

The name requested (e.g., "example").

Parameter usage location:

The location(s) where parameter can be used. The possible locations are authorization request, authorization response, token request, or token response.

Change controller:

For Standards Track RFCs, state "IETF". For others, give the name of the responsible party. Other details (e.g., postal address, email address, home page URI) may also be included.

Hardt

Standards Track

[Page 63]

Specification document(s):

Reference to the document(s) that specify the parameter, preferably including a URI that can be used to retrieve a copy of the document(s). An indication of the relevant sections may also be included but is not required.
