2.2. [illegible](2.2. Client Identifier

2.2. [illegible]

[illegible]——[illegible]

[illegible]([illegible]size)[illegible](size)[illegible]

2.2. Client Identifier

```
   The authorization server issues the registered client a client   identifier -- a unique
string representing the registration   information provided by the client.  The client
identifier is not a
   secret; it is exposed to the resource owner and MUST NOT be used   alone for client
authentication.  The client identifier is unique to
   the authorization server.
   The client identifier string size is left undefined by this   specification.  The client
should avoid making assumptions about the   identifier size.  The authorization server SHOULD
document the size
   of any identifier it issues.
```
