3. Protocol Endpoints

The authorization process utilizes two authorization server endpoints (HTTP resources):

- o Authorization endpoint - used by the client to obtain authorization from the resource owner via user-agent redirection.
- o Token endpoint - used by the client to exchange an authorization grant for an access token, typically with client authentication.

As well as one client endpoint:

- o Redirection endpoint - used by the authorization server to return responses containing authorization credentials to the client via the resource owner user-agent.

Not every authorization grant type utilizes both endpoints.

Extension grant types MAY define additional endpoints as needed.
