3. Protocol Endpoints

```
   The authorization process utilizes two authorization server endpoints
   (HTTP resources):
   o  Authorization endpoint - used by the client to obtain      authorization from the resource
owner via user-agent redirection.
   o  Token endpoint - used by the client to exchange an authorization      grant for an access
token, typically with client authentication.
   As well as one client endpoint:
   o  Redirection endpoint - used by the authorization server to return      responses
containing authorization credentials to the client via
      the resource owner user-agent.
   Not every authorization grant type utilizes both endpoints.
   Extension grant types MAY define additional endpoints as needed.
```
